Love numbers? Want to solve real-world problems with real-life data? Statistics are everywhere and so is the demand for good statisticians, research methodologists and evaluators. The University of Northern Colorado’s doctoral program in Applied Statistics and Research Methods will prepare you to be a critical thinker with the skills needed to conduct meaningful research.

You will learn how to:

• Bridge the gap between statistical theory and practice
• Focus on real-world issues in a variety of fields
• Apply quantitative and qualitative methodologies and measurements
• Analyze data and apply the results to create change

About 30 percent of statisticians work for federal, state or local governments. In addition to government jobs, this degree will qualify you to teach at the university level, provide leadership in research studies in a variety of disciplines and consult in research methods and data analysis in education and industry.

This degree has a 64-credit requirement and takes four to six years to complete. In addition to coursework, completion of the doctoral program requires a student-selected concentration area or cognate, written and oral comprehensive examinations and dissertation research.

“...The faculty in the Applied Statistics and Research Methods Department provided me with the practical knowledge, guidance and support needed to prepare me for my career. I now feel confident in my statistical skills and have been applying these skills in a variety of industries including technology, marketing and website development.”

—Emily Pollock Whitfield, Ph.D., Applied Statistics
The Graduate School
The Graduate School at the University of Northern Colorado helps you further your academic or professional career with small class sizes, topnotch faculty, sophisticated facilities and affordable tuition in 100-plus programs of study.

We offer master’s, doctoral and educational specialist programs in addition to many certificate programs available through on-campus, off-campus and online delivery.

Unique facts
• The Applied Statistics and Research Methods weekly colloquium series gives you the chance to present research, prepare for professional presentations and explore cutting-edge statistical and research methods.

• Faculty members have diverse research interests in everything from education to public health, including misconceptions about math and science, cross-cultural measurement, quality control, teachers as researchers, statistical computer programming and prevention of adolescent sexual risk behavior.
