

# Physics & Astronomy SEMINAR

FRIDAY MARCH 11 3:30PM ROSS 0220

## Building Your Engineering Resume

**Quinton Snouffer**  
Honeybee Robotics

As a recent graduate from the UNC Physics and Astronomy department, I have been working as an Engineer for the past year and been involved in the Aerospace industry for over 2 years. I will be talking about what my daily life is like in the engineering world, specifically in the aerospace industry. I will talk about the types of flight hardware we build, what it takes to build the hardware, and what its like to be a part of it all. My goal is to give you insight into how your interests connect with different types of engineering and how you can use those interests to help build your resume. Your resume is the only piece of paper you have to impress an employer and it's important to have objective evidence showing your skills and interests. Come ask me questions - whether its related to your resume or you are interested to know more about what my company does - I am happy to answer any and all questions.
